UX/UI NEW DESIGN

Clean design following the brand's shapes and morphology.

The primary view target are the logo and login button.

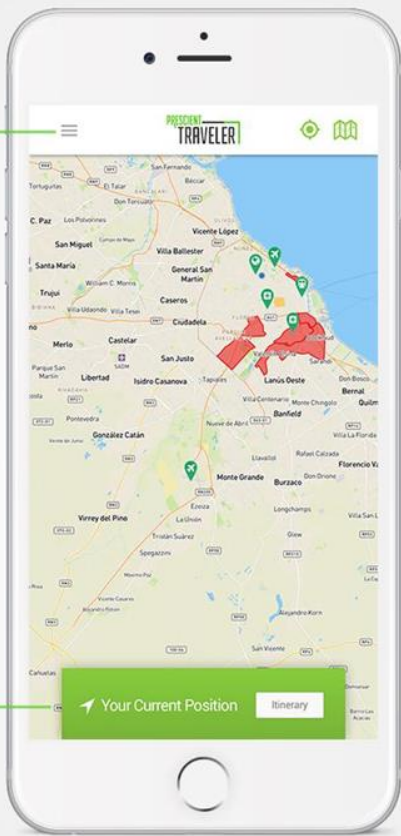

The green color is use in the most importants actions that the user will required.

Text, buttons and other font elements hierarchy were decided to provide better UI/UX experience.

LOGIN PAGE

The header maintains the design concept and clarity from the login page, using white as background color and icons in the green, following the triad of the selected color palette (green, white and black).

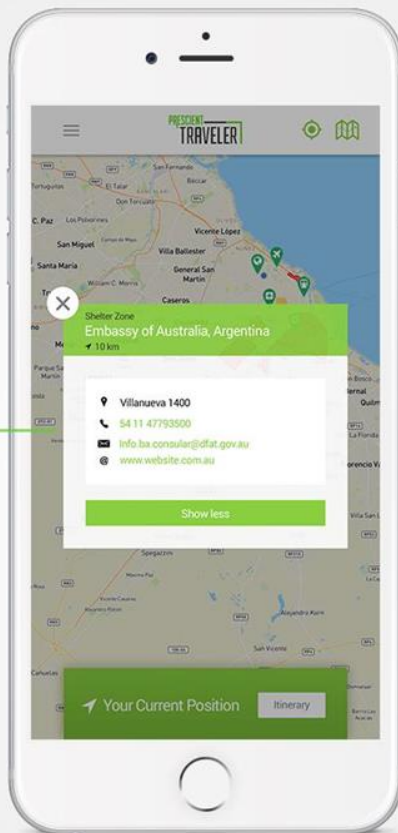

MAP PAGE

The footer increased the contrast with the rest of the page using the green color background color, to maintain clarity we put the rest of the elements in white.

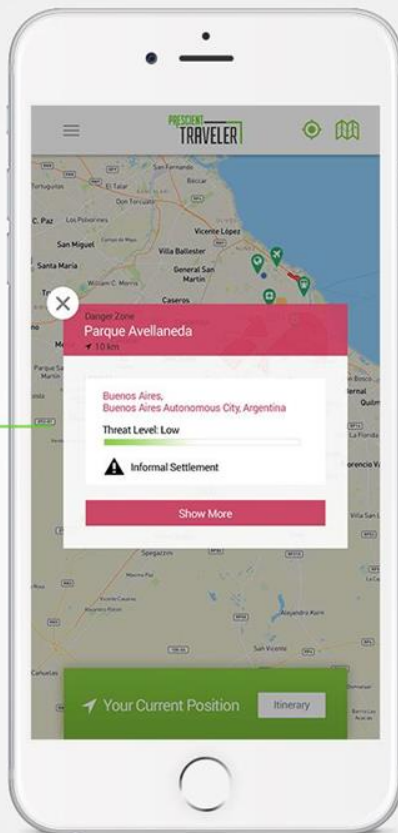

We split the popups in "friendly" and "danger".

For example the "Shelter" popup which we consider "friendly" use the green color in the header, buttons and also for links in the information module.

SHELTER ZONE
MODAL

We added a fourth color to the palette (in red dye), following the same design concept that the “shelter” popup.

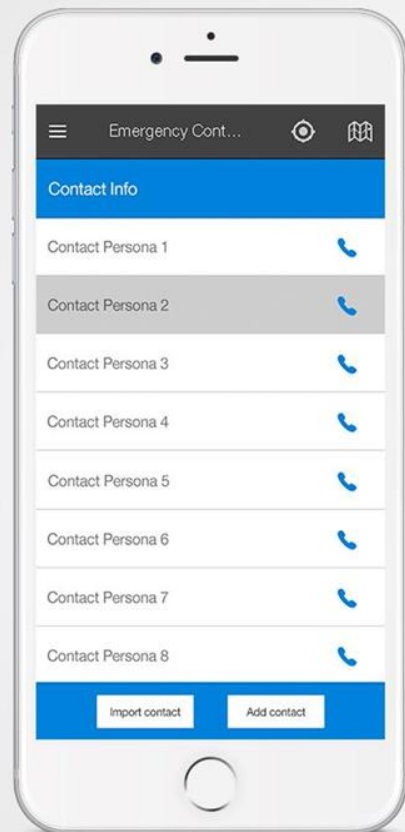

DANGER ZONE
MODAL
